INFORMATION TECHNOLOGY (IT) RISK MANAGEMENT AND RISK ASSESSMENT

In order to run businesses and achieve goals, organizations are becoming increasingly dependent on their information technology systems and the data and assets stored in them. At the same time, the risk of data loss, theft, destruction, alteration and unavailability are increasing. Identity theft, financial and reputation loss, and cybercrime are near epidemic proportions. IT risk management and risk assessment are an essential and critical part of an organization's business strategy.
